VolatileExample.java:->

```java
package com.example.demo;

public class VolatileExample {
    private volatile boolean runnning=true;
    public void stopRunning()
    {
        runnning=false;
    }
    public void run()
    {
        while (runnning)
        {
            System.out.println("Thread is running");
        }
        System.out.println("Thread is stopped");
    }
}
```

VolatileTest.java:->

```java
package com.example.demo;

public class VolatileTest {
    public static void main(String[] args) {
        VolatileExample volatileExample=new VolatileExample();
        Thread thread=new Thread(volatileExample::run);
        thread.start();
        try
        {
            Thread.sleep(1000L);

        } catch (InterruptedException e) {
            throw new RuntimeException(e);
        }
        volatileExample.stopRunning();

    }
}
```
